

Mission Idea Contest

Regional Seminar in Mexico

September 10, 2010

The MIC seminar in México took place in a very interesting way. The attendants received with enthusiasm the mission idea contest. More than questions, the attendant gave comments about their interest to generate MIC proposals.

The MIC Mexican seminar was attended by academicians, reserachers and postgraduate students from several educative institutions from the country. Among them : CICESE research center from Baja California, CITEDI research center from Tijuana, INAOE research center from Puebla, UPAEP Private University in Puebla, Engineering Postgraduate Students from UNAM, Faculty of Engineering UNAM, as well as from Institute of Engineering UNAM.

CICESE and CITEDI research centers are located at more than 2,800 km from Mexico City (where UNAM is located). That is why they were connected to the seminar by Videoconference facilities.

The result of the seminar was successful in the sense that few proposals were commented which will evolve into National proposals. Because they will be generated in team fashion by several institutions from México.

Dr. Esaú Vicente Vivas

Instituto de Ingeniería, UNAM, Mexico
