

HEART VALVE
PROSTHESIS BEHAVIOUR IN
MICROGRAVITY ENVIRONMENT

Chiara Manzini
Aerospace Engineer

- **Bachelor Degree:**
Aerospace Engineering
Politecnico di Milano
- **Master Degree:**
Systems and control
(Aerospace Engineering)
ISAE-Supaero
- **High interest in Biomedical world**

Mass and volume

Component	Mass [g]	Volume [mm ³]
Pump	400	34 x 37 x 64
High resolution camera	300	64 x 64 x 66
Pinch solenoid valve	250	61 x 42 x 99
pH sensor	50	12 (d) x 120

Total estimated encumbrance: **3U x 4U**

Costs

Sub-section	Costs (€)	Critical element
Sensors	2.100	Flow meter
Mock-up system	5.500	Pump and Bioprosthesis
Data acquisition	7.100	High speed camera
Launch	85.000	Weight (\approx 1.5 kg)

Total estimated cost: **99.700 €**

Weight of each subsystem (%)

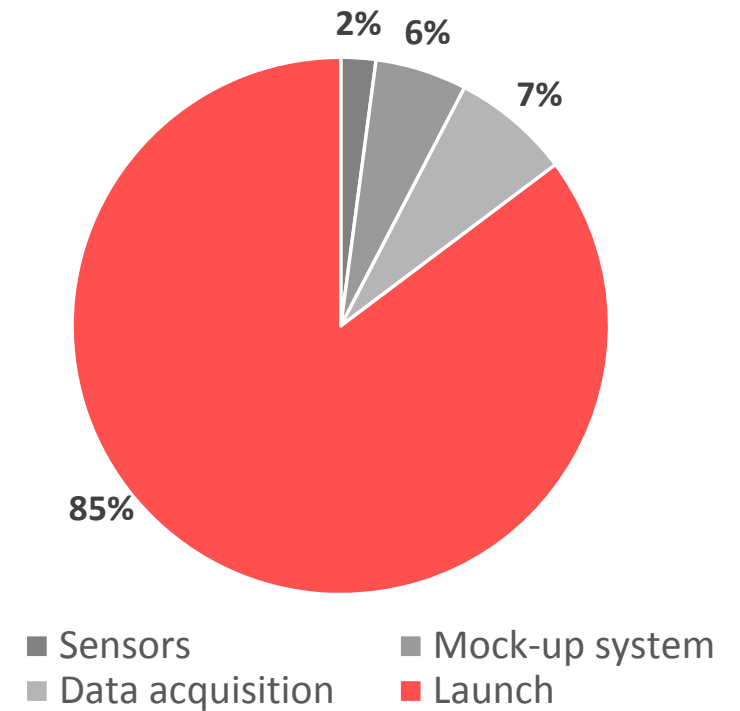

Costs

Data acquisition	7.100	High speed camera
Launch	85.000	Weight (\approx 1.5 kg)

Total estimated cost: **99.700 €**

Weight of each subsystem (%)

Risk analysis

- **Breaking or failure of components**

Risk analysis

- **Breaking or failure of components**
- Accuracy of calibration of the sensors

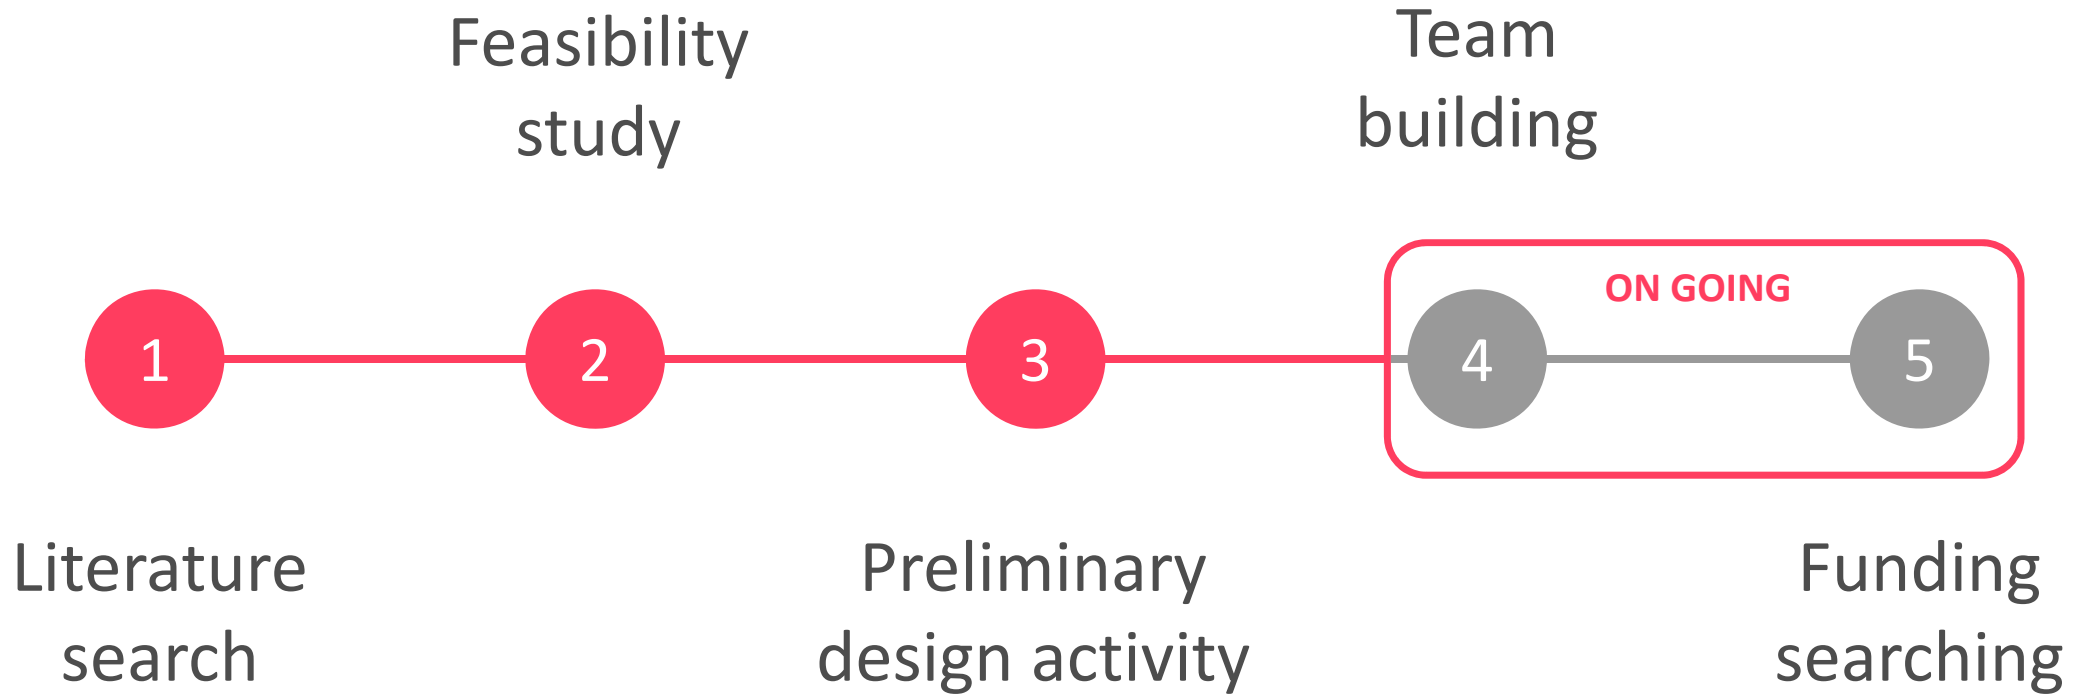

Risk analysis

- **Breaking or failure of components**
- Accuracy of calibration of the sensors
- Bad illumination

Risk analysis

- **Breaking or failure of components**
- Accuracy of calibration of the sensors
- Bad illumination
- Supersaturation of the fluid
